

DeliverNow — Full Redesign of the Delivery Ecosystem

Project Name

DeliverNow — Full Redesign of the Delivery Ecosystem (Clients, Restaurants, Runners, Runner Managers)

Background

DeliverNow partners with restaurants to offer take-away delivery using a network of runners. Recently, DeliverNow received negative feedback from customers, runners, managers, and restaurant owners:

- ❌ Customers: Inaccurate delivery times, too much or unwanted cutlery/condiments
- ❌ Runners: Unfair or inefficient route allocation
- ❌ Managers: Lack of visibility and control over runners
- ❌ Restaurants: Difficulty managing on-site and take-away preparation

DeliverNow seeks to redesign its full digital experience to address these challenges and improve satisfaction across all user types.

Design Goals

- 🎯 Deliver accurate, real-time delivery estimates to clients
- 🎯 Enable clients to customize delivery (e.g. no cutlery, no condiments)
- 🎯 Provide runners with fair, optimized routes + clear task flows
- 🎯 Equip managers with effective runner tracking + task allocation tools
- 🎯 Help restaurants manage in-house + take-away orders smoothly

Target Users

Client / Customer

- Orders food for delivery or pick-up
- Uses mobile + desktop
- Wants fast, accurate delivery with clear customization options

Restaurant Owner / Staff

- Prepares orders for dine-in + take-away
- Uses desktop + mobile
- Needs clear view of incoming orders, prep timing, delivery handover

Runner / Delivery Person

- Delivers food from restaurant to client
- Uses mobile
- Needs clear route, task list, live updates

Runner Manager

- Oversees delivery team
- Uses desktop + mobile
- Needs fleet dashboard, task reallocation, runner monitoring

Problems to Solve

-  Inaccurate delivery estimates frustrate clients
-  Extra/unwanted condiments and cutlery create waste
-  Runners receive inefficient or unfair routes
-  Managers lack visibility and flexible tools for fleet management
-  Restaurants struggle to coordinate dine-in and take-away prep

Opportunities

- 💡 Real-time order tracking for clients
- 💡 Delivery customization (cutlery, condiments, notes)
- 💡 Dynamic route optimization for runners
- 💡 Manager dashboard for fleet visibility + task management
- 💡 Restaurant order management system with separate workflows for dine-in and take-away

Scope

- Design mobile + desktop interfaces for:
 - Clients
 - Restaurant owners / staff
 - Runners
 - Runner managers
- Build one full user journey prototype per persona (order flow)
- Mid-fidelity prototype + testing (Week 3)
- High-fidelity prototype + testing (Week 5)

Constraints

- Timeline: 5 weeks
- Team: 2 people
- Must test mid-fi and hi-fi prototypes with at least 5 users
- Design for both mobile and desktop where applicable

Success Metrics

- 📉 Fewer delivery complaints (wrong timing, waste)

-  Increased client satisfaction in post-order surveys
-  Runners report higher satisfaction with routes
-  Managers report better control over fleet
-  Restaurants report easier order handling

Design Process

- ✓ **Empathize:** Research + interviews (real users)
- ✓ **Define:** Problem statements + journey maps
- ✓ **Ideate:** Brainstorm + sketch wireframes
- ✓ **Prototype:** Mid-fi and hi-fi clickable prototypes
- ✓ **Test:** User tests at both stages
