

DeliverNow Runner Manager

Interview Insights

1. **Poor location visibility(Mary, Steve)**

👉 Managers struggle with unreliable or laggy runner tracking, making it hard to monitor operations in real time.

2. **Inefficient manual task assignment(Ken, Kelvin, Steve)**

👉 When the system fails, manual reassignment is slow and frustrating because managers can't quickly identify the nearest available runner.

3. **No clear live order status(Steve, Mary, Stellar)**

👉 Managers want a simple dashboard view to see the status of all orders (e.g. picked up, en route, delivered) without extra clicks or calls.

4. **Reactive, not proactive management(Mary, Ken)**

👉 Managers only find out about delays after a customer complains — they want real-time alerts for issues like long stops or route problems.

5. **Disjointed communication channels(Mary, Ken, Steve)**

👉 Managers juggle multiple communication tools (calls, SMS, WhatsApp) and want an integrated solution to streamline runner communication.
