

TITLE

Runner Manager Journey Map

PERSONA

SCENARIO

I have a bulk of orders and I need to assign orders to runners. This process should be fair and fast.

GOALS & EXPECTATIONS

- Monitor runner performance in real time
- Reduce delivery delays and customer complains
- Assign tasks efficiently without confusion

Phase 1

1. Logs in and views dashboard
2. Assigns delivery to runner

Phase 2

4. Monitors delivery progress
5. Handles a delay or issue

Phase 3

6. Contacts runner or customer

Phase 1

7. Reviews delivery log
8. Ends shift, creates report

USER THOUGHTS

How many runners are active?

Who's closest and free?

I need to get updates fast

Did that order complete ok?

How did the team perform?

Is this order on time?

Why haven't they delivered?

PAINS

- Lack of overview or status data
- No quick access to location or availability
- No realtime alerts

- Only learns of problems late
- Jumps between calls, WhatsApp, and app

- Limited visibility on past issues
- Needs to manually gather data

OPPORTUNITIES

- Show runner + order statuses in one live view
- Smart assign tool with map + filters
- Add delay detection + alerts

- Add automated incident notifications (traffic, stalled delivery, etc.)
- Built-in chat + call buttons

- Provide timeline log of delivery journey
- Add exportable shift summary feature
